

Let's Ear It For Omnimount!

Date: Thursday, 20 December 2007

Neat solutions for speaker mounting and cable management

Omnimount's recently introduced EAR series enables neat, stylish and handy solutions for home cinema systems. The low-profile EAR-S (\$199) lets you mount flat-panel speakers flush either side of your screen and the EAR-C (\$149) will place a centre-channel speakers directly below it. The EAR-C is also perfect for 'all-in-one' soundbar designs.

*'Not only does Omnimount's EAR series fix loudspeakers flush to your screen for a smart and space-saving solution,' says **Geoff Matthews**, Marketing Director of Convoy International, which distributes Omnimount in Australia, 'but this ideal positioning also ensures that sound and video always come from the same direction, no matter how you swivel your screen on the mount, delivering optimum performance every time.'*

The easy-to-install EAR series mounts use a universal mounting system that accommodates nearly all flat panel speakers on the market and works with almost every medium and large flat panel screen, and can be retro-fitted to existing installations. Omnimount has also released an impressive new cable management system known as CMK (\$76). *'It's a simple and affordable alternative to running the cables through your wall,' says Matthews. 'Aesthetically pleasing, this is the perfect finishing touch to a wall-mounted flat panel. The modular design allows for any configuration with the covers being cut to the desired length. What's more, they can be painted to match your wall exactly.'*

An installation using Omnimount wall mounts and CMK cable management
