Phone: 1800 817 787

The JBL GT5-12 12-inch (300mm) subwoofer driver now comes in two hot new enclosure versions that supply serious bass straight out of the box. The GT5-1204BR is the single enclosure and the massive GT5-2402BR works as the dual sub system. The new subwoofer enclosures feature dual-stacked magnets and a vented motor structure to increase both performance and power handling. Proprietary Slipstream technology, incorporated into the port, eliminates background noise and ensures steady airflow so that the bass remains clear and deep, even at high volumes.
